	Joint	106	27.2
Ethnicity	Punjabi	210	53.8
	Sindhi	19	4.9
	Balochi	14	3.6
	Pakhtoon	69	17.7
	Others	78	20

Above table displays the frequency and percentage distribution of demographic variables within the study. The table provides demographic information on gender, education level, socioeconomic status, family system, and ethnicity. Among the participants, 47.7% are male, and 52.3% are female. Education level shows that 77.7% are undergraduate, 16.9% are graduate whereas post graduates are 5.4%. In terms of socioeconomic status, 3.3% are from lower class, 82% are from middle class, and 14.6% are from upper class. Regarding family

system type, 72.8% belongs to nuclear system whereas, 27.2% from joint system. The participants belong from different ethnicities, 53.8% are Punjabi, 4.9% are Sindhi, 3.6% are Balochi, 17.7% are Pakhtoons, whereas, 20% belongs to Others.

NPI-EE	4	0.20	1.04(0.94)	0-13	0-11	0.69	-0.05
LBS	8	0.62	21.84(5.10)	8-40	8-40	0.17	0.56

Note. *RSAT= Relationship Satisfaction, NPIT= Total Narcissistic Personality Inventory, NPI-LA= Narcissistic Personality Inventory- Leadership/Authority, NPI-GE= Narcissistic Personality Inventory-Grandiose/Exhibitionism, NPI-EE= Narcissistic Personality Inventory-Entitlement/Exploitativeness, LBS= Love Bombing Scale.*

Above table provides descriptive statistics, alpha coefficients, and item counts for the Relationship Satisfaction Scale, Narcissistic Personality Inventory and its subscales, along

with Love Bombing Scale. The RSAT shows strong internal consistency, with an alpha coefficient of 0.89, indicating high reliability. On the other hand, the reliability coefficients for the NPI subscales fall below acceptable standards: NPI EE has a very low alpha of 0.20, NPI GE is at 0.30, and NPI LA reaches only 0.45. Additionally, the Total NPI alpha coefficient is 0.53, suggesting poor overall internal consistency. The LBS scale also has a somewhat questionable alpha of 0.62, which is below the generally acceptable range. Overall, apart from RSAT, all scales show internal consistency levels that do not meet the expectable criterion for reliability.

Narcissistic Personality Inventory, NPI-LA= Narcissistic Personality Inventory-Leadership/Authority, NPI-GE= Narcissistic Personality Inventory-Grandiose/Exhibitionism, NPI-EE= Narcissistic Personality Inventory-Entitlement/Exploitativeness, LBS= Total Love Bombing Scale.

The table shows a comparison of Relationship Satisfaction, Love Bombing, Narcissism Personality Inventory and its sub-domains; Entitlement/ Exploitativeness, Grandiose/Exhibitionism, Leadership/Authority between males and females. Males scored higher than females in two scales, Relationship Satisfaction and Love Bombing with a slight difference, no difference found in Narcissism. Out of the results, only Narcissistic Personality Inventory- Leadership/Authority t (388) = 2.06, p= 0.03 is statistically significant which means males (M= 1.72) scored higher than females (M=1.47) in this scale, as it meets the standard of t(df)<1.96 and p< 0.05. The results of other scales are non-significant, such as, for Relationship Satisfaction Scale t (388) = 0.83; p= 0.40; Total Narcissistic Personality Inventory t (388) = 1.77, p=0.07; Narcissistic Personality Inventory-Grandiose/Exhibitionism, t (388) = 0.14, p= 0.88; Narcissistic Personality Inventory-Entitlement/Exploitativeness, t (388) = 1.60, p= 0.10, and Total Love Bombing Scale t (388) = 0.86, p= 0.38.

This table shows a comparison of Relationship Satisfaction, Narcissistic Personality, and Love Bombing between Nuclear and Joint family systems. Participants from joint family system scored higher on Entitlement/Exploitativeness and Grandiose/Exhibitionism subdomains of Narcissistic Personality Inventory as well as on total Narcissistic Personality Inventory than those from nuclear family system. There were no significant differences between nuclear and joint family systems on Love Bombing Scale, Relationship Satisfaction and Narcissistic Personality Inventory- Leadership/Authority. The analysis yielded significant results for Narcissistic Personality Inventory-Entitlement/Exploitativeness t (388) = -3.14, p = 0.00, Narcissistic Personality Inventory-Grandiose/Exhibitionism t (388) = -2.34, p = 0.02 and Total Narcissistic Personality Inventory t (388) = -3.26, p = 0.00. While there are non-significant mean differences for Relationship Satisfaction t (388) = 0.62, p = 0.53, Love bombing Scale t (388) = -1.18, p = 0.23 and Narcissistic Personality Inventory-Leadership/Authority t (388) = -1.47, p = 0.14 between participants from nuclear and joint family systems.

Table 5 presents the results of One-Way ANOVA conducted to examine the differences in Relationship Satisfaction, Narcissistic Personality, its subdomains, NPI-Leadership/Authority, NPI-Grandiose/Exhibitionism, NPI-Entitlement/Exploitativeness, and Love Bombing based on socio-economic levels among participants (N= 390). The socioeconomic levels are categorized as Lower (1), Middle (2), Upper (3). The results indicated no significant differences in Relationship Satisfaction (F=1.48, p=0.22), Total Narcissistic Personality (F=1.89, p=0.15), Narcissistic Personality Inventory- Leadership/

Authority (F= 1.14, p= 0.31), Narcissistic Personality Inventory-Grandiose/Exhibitionism (F= 2.33, p=0.09), Narcissistic Personality Inventory-Entitlement/Exploitativeness (F= 0.27, p= 0.75) and Love Bombing (F=0.07, p= 0.92) based on socioeconomic levels among the participants.

Note. *RSAT= Relationship Satisfaction, NPIT= Total Narcissistic Personality Inventory, NPILA= Narcissistic Personality Inventory- Leadership/Authority, NPIGE= Narcissistic Personality Inventory-Grandiose/Exhibitionism, NPIEE= Narcissistic Personality Inventory-Entitlement/Exploitativeness, LBS= Love Bombing Scale, M= Mean, SD= Standard Deviation, D= Mean Difference, p= Significance, CI= Confidence Interval, LL= Lower Limit, UL= Upper Limit*

Table 6 presents the results of One-Way ANOVA conducted to examine differences in Relationship Satisfaction, Narcissistic Personality, its subdomains, NPI-Leadership/Authority, NPI-Grandiose/Exhibitionism, NPI-Entitlement/Exploitativeness and Love Bombing based on education levels among participants (N= 390). The education levels are categorized as (1) Under-graduate, (2) Graduate, (3) Post-graduate. The results indicated significant difference in Relationship Satisfaction ($F=5.00$, $p<0.01$) among the education levels. Post Hoc test revealed that postgraduate participants (M= 35.09, SD=4.79) had

significantly higher relationship satisfaction compared to undergraduate (M=29.25, SD=8.35) and graduate (M=30.53, SD=9.71) participants ($p < 0.01$). However, no significant differences were found in Total Narcissistic Personality Inventory ($F= 1.31$, $p= 0.26$), Narcissistic Personality Inventory- Leadership/Authority ($F= 0.50$, $p= 0.60$), Narcissistic Personality Inventory-Grandiose/Exhibitionism ($F= 1.86$, $p= 0.15$), Narcissistic Personality Inventory-Entitlement/Exploitativeness ($F= 2.45$, $p= 0.08$), and Love Bombing ($F= 1.71$, $p= 0.18$) across the education levels.

Table 7 presents the results of One-Way ANOVA conducted to examine differences in Relationship Satisfaction, Narcissistic Personality, its subdomains, NPI- Leadership/ Authority, NPI-Grandiose/Exhibitionism, NPI-Entitlement/Exploitativeness and Love Bombing based on ethnicity among participants (N= 390). The ethnicities are categorized as (1) Punjabi, (2) Sindhi, (3) Balochi, (4) Pakhtoon, and (5) Others. The results indicated significant differences in Total Narcissistic Personality Inventory ($F= 3.96$, $p<0.01$) among the ethnicities. Post hoc revealed that Balochis (M= 5.92, SD=1.07) had significantly higher narcissism than Punjabis (M=4.80, SD=2.34), Sindhis (M=5.73, SD=1.44), Pakhtoons (M=4.36, SD=2.30), and Other (M=4.06, SD=2.40) ethnicities. Similarly, significant differences were found in the Grandiose/Exhibitionism domain of Narcissistic Personality ($F= 3.36$, $p= 0.01$) among the ethnicities. Post Hoc revealed that Balochi participants (M= 2.71, SD= 1.26) had significantly higher Grandiose/Exhibitionism compared to Punjabi (M=2.06, SD=1.18), Sindhi (M=2.57, SD= 1.01), Pakhtoon (M=1.81, SD= 1.14) and Other (M=1.83, SD=1.24) participants. Additionally, significant differences were found in the Entitlement/Exploitativeness domain of Narcissistic Personality ($F=3.49$, $p<0.01$) among the ethnicities. Post Hoc revealed that participants who were Sindhi (M= 1.63, SD= 0.76) had significantly higher Entitlement/Exploitativeness compared to Punjabi (M= 1.06, SD= 0.94), Balochi (M= 1.42, SD= 0.75), Pakhtoon (M= 1.01, SD= 1.03) and Other (M= 0.83, SD= 1.24) participants. However, no significant differences were found in Relationship Satisfaction ($F=1.62$, $p=0.16$), Love Bombing ($F=0.95$, $p=0.43$) and Narcissistic Personality Inventory-Leadership/Authority ($F=1.57$, $p=0.18$) across the ethnicities.

Note. *Correlation is significant at the 0.01 level (** = Very Significant). M(SD)= Mean (Standard Deviation), RSAT= Relationship Satisfaction, NPIT= Total Narcissistic Personality Inventory, NPILA= Narcissistic Personality Inventory- Leadership/Authority, NPIGE= Narcissistic Personality Inventory-Grandiose/Exhibitionism, NPIEE= Narcissistic Personality Inventory-Entitlement/Exploitativeness, LBS= Love Bombing Scale*

Table 5 shows weak, negative and statistically significant correlation of Relationship Satisfaction with Entitlement/ Exploitativeness (r= -0.26, p= 0.01). This means that an increase in Entitlement/ Exploitativeness is associated with a slight decrease in Relationship Satisfaction. Pearson product moment correlation of Narcissistic Personality was found to be strong, positive and statistically significant with Leadership/Authority (r=0.73, p=0.01) Grandiose/Exhibitionism (r= 0.72, p= 0.01), and moderate, positive and statistically significant with Entitlement/Exploitativeness (r=0.62, p=0.01). This shows that an increase in narcissism scores is associated with higher Grandiose/Exhibitionism, Leadership/Authority and Entitlement/Exploitativeness levels in participants. The table also shows weak, positive and statistically significant correlation of Narcissistic Personality with Love Bombing (r=0.19, p=0.01). This means that an increase in Narcissistic Personality is associated with a slight increase in Love Bombing. Similarly, table 5 also shows a weak, positive and statistically significant correlation of Leadership/Authority with Grandiose/Exhibitionism (r= 0.25, p=0.01), Entitlement/Exploitativeness (r= 0.23, p=0.01), and Love Bombing (r=0.09, p=0.01). This means that an increase in Leadership/Authority is associated with a slight increase in Grandiose/Exhibitionism, Entitlement/Exploitativeness and Love Bombing. Furthermore, it also shows weak, positive and statistically significant correlation of Grandiose/Exhibitionism with Entitlement/Exploitativeness (r= 0.19, p= 0.01), and Love Bombing (r= 0.16, p= 0.01). This means that an increase in Grandiose/Exhibitionism is associated with a slight increase in Entitlement/Exploitativeness, and Love Bombing. At last, table shows weak, positive and statistically significant correlation of Entitlement/

Exploitativeness with Love Bombing (r= 0.16, p=0.01). This means an increase in Entitlement /Exploitativeness is associated with a slight increase in Love Bombing.

Linear Regression Analysis Predicting Relationship Satisfaction through Narcissistic Personality and Love Bombing (N=390)

Predictors	*R*	R^2	*F*	*B*	*t*	*Confidence Interval 95%* *LL*	*UL*
				Criterion Variable= RS			
Model 1	0.92	.00	1.66				
NPIT				-0.33	-1.76	-0.71	0.03
LBS				-0.00	-0.10	-0.17	0.16

Note. *RS= Relationship Satisfaction, NPIT= Total Narcissistic Personality Inventory, LBS= Love Bombing Scale, CI= Confidence Interval, LL= Lower Limit, UL= Upper Limit, F= Explained Variance, t= Mean Difference*

The dependent variable, Relationship Satisfaction, was regressed on the predicting variables, Love Bombing and Narcissistic Personality Inventory, to test the research hypothesis. The model was non-significant, F= 1.66, p >0.05, indicating that the combination of Love Bombing and Narcissistic Personality does not significantly predict Relationship Satisfaction. The R^2 value of 0.00 indicates that the predictors (LBS and NPI) explain 0% of the variance in Relationship Satisfaction.

Table 11

Mediating Role of Relationship Satisfaction on the Relationship between Study Variables (N= 390)

Model	*Direct Effect*	*Indirect Effect*	*Confidence Interval*	
			UL	*LL*
Love Bombing -> Narcissistic Personality -> Relationship Satisfaction	-0.008	-0.03	34.37	26.89
R	0.19			
R^2	0.03			

Note. *UL= Upper Limit, LL= Lower Limit*

The study assessed the mediating role of narcissistic personality on the relationship between love bombing and relationship satisfaction. The direct effect of love bombing on relationship satisfaction was non-significant (direct effect= -0.00, p= 0.91). This suggests that love bombing, on its own, does not have a direct impact on relationship satisfaction. The mediating effect of narcissistic personality was negative (indirect effect = -0.03), with a 95% confidence interval ranging from -0.07 to 0.006. Since the confidence interval includes zero, the indirect effect is not statistically significant. This indicates that narcissistic personality does not significantly mediate the relationship between love bombing and relationship satisfaction. The R-squared (R^2) value for the model was 0.03, indicating that only 3% of the variance in relationship satisfaction was explained by the combined effects of love bombing and narcissistic personality. Hence, neither love bombing nor narcissistic personality appears to play a significant role in determining relationship satisfaction within this sample.

5.	NPIEE	-0.24**	0.59**	0.21**	0.18**	-	
6.	LBS	-0.01	0.19**	0.10*	0.15**	0.17**	-

Note. *Correlation is significant at the 0.01 level (** = Very Significant). RSAT= Relationship Satisfaction, NPIT= Total Narcissistic Personality Inventory, NPILA= Narcissistic Personality Inventory- Leadership/Authority, NPIGE= Narcissistic Personality Inventory- Grandiose/Exhibitionism, NPIEE= Narcissistic Personality Inventory- Entitlement/Exploitativeness, LBS= Love Bombing Scale*

The study used Sperman's Correlation to assess the relationship between Relationship Satisfaction, Narcissistic Personality, along with its sub-domains; NPI- Leadership/Authority, NPI -Grandiose/Exhibitionism, NPI -Entitlement/Exploitativeness and Love Bombing. Spearman's correlation of Relationship Satisfaction and Entitlement/ Exploitativeness was found to be weak, negative and statistically significant ($r= -0.24$, $p < 0.01$), indicating that an increase in Entitlement/Exploitativeness is associated with a slight decrease in Relationship Satisfaction. Spearman's correlation of Total Narcissistic Personality Inventory was found to be strong, positive and statistically significant with Leadership/Authority ($r= 0.72$, $p < 0.01$), Grandiose/Exhibitionism ($r= 0.71$, $p < 0.01$), and moderate, positive and statistically significant with Entitlement/Exploitativeness ($r= 0.59$, $p < 0.01$). Similarly, weak but positive and statistically significant relation with Love Bombing ($r= 0.19$, $p < 0.01$). This means that an increase in Total Narcissistic Personality is associated with a slight increase in Love Bombing. Spearman' correlation of Leadership/ Authority was found to be weak, positive and

statistically significant with Grandiose/Exhibitionism (r= 0.25, p < 0.01), Entitlement/Exploitativeness (r= 0.21, p < 0.01), and Love Bombing (r= 0.10, p < 0.01). This means that an increase in Leadership/ Authority is associated with a slight increase in Grandiose/Exhibitionism, Entitlement/Exploitativeness, and Love Bombing. Spearman's correlation of Grandiose/Exhibitionism was found to be weak, positive and statistically significant with Entitlement/Exploitativeness (r =0.18, p < 0.01), and Love Bombing (r =0.15, p < 0.01), similarly, correlation between Entitlement/Exploitativeness, and Love Bombing was found to be weak, positive and statistically significant (r= 0.17, p <0.01). These findings, summarized in Table 12, indicate significant relationships between the variables, providing insights into how these variables are interrelated and how each relates to Relationship Satisfaction.

a. Grouping Variable: Gender

Table 13

Mann- Whitney Test for Group Comparison (N= 390)

Variables	*Males (n= 186) M*	*Females (n= 204) M*	*Mann Whitney U*	*Z*
Relationship Satisfaction	201.89	189.67	17783.5	-1.07
Total Narcissistic Personality	206.76	185.24	16878	-1.89
NPI- Leadership/Authority	199.40	191.94	18246.5	-0.65
NPI- Grandiose/Exhibitionism	196.34	194.73	18815	-0.14
NPI- Entitlement/Exploitativeness	203.97	187.77	17396	-1.49
Love Bombing	207.80	184.28	16684	-2.12

The table above presents a comparison of Relationship Satisfaction, Total Narcissistic Personality, Leadership/Authority, Grandiose/Exhibitionism, Entitlement/Exploitativeness, and Love Bombing between males and females using Mann- Whitney Test. The analysis revealed that males scored higher in Love Bombing than females, with significant differences observed ($U= 16684$, $Z= -2.12$, $p < 0.05$). However, there were no significant differences between males and females in terms of Relationship Satisfaction ($U= 17783.5$, $Z= -1.07$, $p > 0.05$), Total Narcissistic Personality ($U= 16878$, $Z=-1.89$, $p > 0.05$), Leadership/Authority ($U= 18246.5$, $Z= -0.65$, $p > 0.05$), Grandiose/Exhibitionism ($U=18815$, $Z= -0.14$, $p > 0.05$) and Entitlement/Exploitativeness ($U= 17396$, $Z= -1.49$, $p > 0.05$). These results indicate that while Love Bombing differs significantly by gender, other factors such as Relationship Satisfaction, Total Narcissistic Personality, Leadership/Authority, Grandiose/Exhibitionism, and Entitlement/Exploitativeness do not show significant gender differences.

NPI- Grandiose/Exhibitionism	228.19	190.60	215.56	3.72	2
NPI- Entitlement/Exploitativeness	208.50	194.72	196.91	0.22	2
Love Bombing	198.96	197.89	181.31	1.06	2

Note. *M= Mean Rank, df= Degree of Freedom*

Table 14 presents the results of Kruskal-Wallis Test conducted to examine differences in Relationship Satisfaction, Narcissistic Personality, NPI- Leadership/Authority, NPI-Grandiose/Exhibitionism, NPI- Entitlement/Exploitativeness, and Love Bombing based upon socioeconomic levels among participants (N= 390). The Socioeconomic Levels were categorized as (1) Lower, (2) Middle, and (3) Upper. The results indicated non-significant differences in all variables, Relationship Satisfaction (chi square= 2.21, df=2, p> 0.05), Narcissistic Personality (chi square= 3.11, df=2, p> 0.05), Leadership/Authority (chi square= 2.51, df=2, p> 0.05), Grandiose/Exhibitionism (chi square= 3.72, df=2, p> 0.05), Entitlement/ Exploitativeness (chi square=0.22, df=2, p> 0.05), and Love Bombing (chi square=1.06, df=2, p> 0.05). These findings suggest that socioeconomic status does not significantly affect the levels of Relationship Satisfaction, Narcissistic Personality, NPI- Leadership/Authority, NPI-Grandiose/Exhibitionism, NPI- Entitlement/Exploitativeness, and Love Bombing.

Table 15

Chi-Square test to examine relationship between gender and SES among participants (N=390)

Gender	*SES*	*Lower*	*Middle*	*Upper*
Male	Count	12	154	20
	% within gender	6.5%	82.8%	10.8%
Female	Count	1	166	37
	% within gender	0.5%	81.4%	18.1%
Chi Square=	14.02			

Note. *SES= Socioeconomic Status*

The results of Chi-Square test are presented to examine the differences between gender and socioeconomic status (SES) among the participants. The socioeconomic categories are Lower, Middle, and Upper. The analysis revealed that there are significant differences in the distribution of socioeconomic status among genders (chi square= 14.02, df=2, $p< 0.001$). 18.1% of females are represented in the Upper category of socioeconomic status, which is more than males (10.8%). 6.5% of males are represented in the Lower category of socioeconomic status, which is more than females (0.5%). Both genders are heavily concentrated in the Middle category, with just a minute difference (males= 82.8%, females= 81.4%). These results suggest that the gender significantly affects the distribution of socioeconomic status among the participants, indicating a dissimilar pattern of socioeconomic distribution for both males and females.
